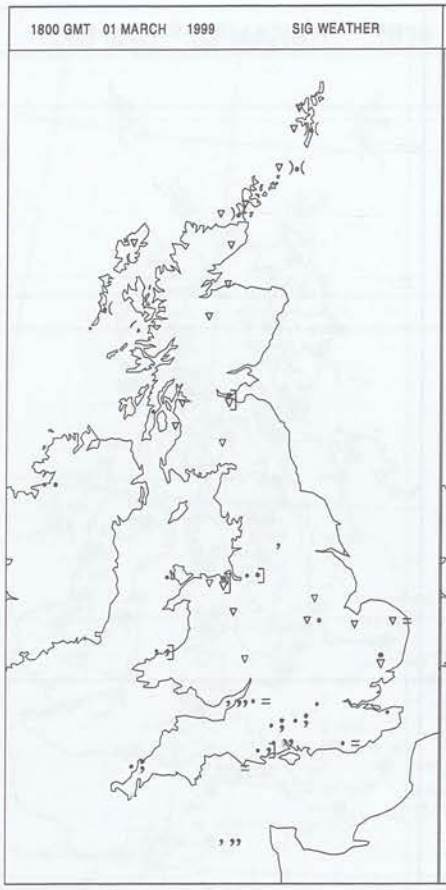
SIGNIFICANT WEATHER



Summary of UK weather for Monday 1 March 1999

England, Wales, Northern Ireland and southern Scotland had a cloudy night with outbreaks of rain, the rain heaviest across northern and western areas. Elsewhere there were some clear spells, however showers affected the north and west of Scotland.

Much of England and Wales remained cloudy during the morning with rain or drizzle. Rain cleared Northern Ireland, southern Scotland and northern England and the cloud became more broken. The rest of Scotland had sunny spells and just a few showers in the north and west with little change through the afternoon.

Sunny intervals developed across Southern Scotland, Northern Ireland and northern England during the afternoon and spread across the Midlands and East Anglia, accompanied by a few showers. Further south and west the cloud persisted with patchy drizzle in the west.

Apart from the odd shower, central and northern Scotland had a mainly dry evening with clear intervals. Further south the cloud increased with some light rain and drizzle across southern and central England and Wales.

The highest gust was 53 knots at Aberporth. Temperatures were generally mild in the north and very mild in the south.

EXTREMES

Highest Maximum:
15.3 Marham, Norfolk
Lowest Maximum:
4.6 Loch Glascarnoch, Ross & Cromarty
Lowest Minimum:
-0.7 Aboyne, Aberdeenshire
Lowest Grass Minimum:
-7.4 Aboyne, Aberdeenshire
Most Rain:
31.2 Capel Curig, Gwynnedd
Most Sun:
8.9 Kinloss, Moray (In Grampian Region)

SIGNIFICANT WEATHER

Summary of UK weather for Tuesday 2 March 1999

Central and northern Scotland began Tuesday mostly clear and cold with a few wintry showers in the far northeast. Northern Ireland, Wales and much of southern England were cloudy with some outbreaks of rain and misty around southwestern coasts and hills. Remaining parts were mostly dry but rather cloudy.

During the course of the night the rain extended to all of England and all but the northeast of Scotland, but it had affected even Orkney by mid morning. Across more southern parts of England the rain at the same time was turning mostly to drizzle and by afternoon some drier and brighter spells had developed.

The middle afternoon saw the arrival of some quite heavy rain in western areas and this spread east across all parts by early evening, accompanied by some squally winds with gusts to around 50 to 54 knots across exposed southern and some western parts. In the wake of the rain it became clearer across all by the extreme east and far northeast by late evening, albeit with blustery showers, chiefly in western parts.

Temperatures were exceptionally mild where brightness developed early afternoon in the south, but were above normal if not mild everywhere but Shetland.

EXTREMES

Highest Maximum:
15.1 Heathrow, Greater London
Lowest Maximum:
3.5 Tulloch Bridge, Inverness-Shire
Lowest Minimum:
-3.9 Aboyne, Aberdeenshire
Lowest Grass Minimum:
-8.7 Aboyne, Aberdeenshire
Most Rain:
43.2 Capel Curig, Gwynnedd
Most Sun:
3.1 Tiree, Argyll (In Strathclyde Region)

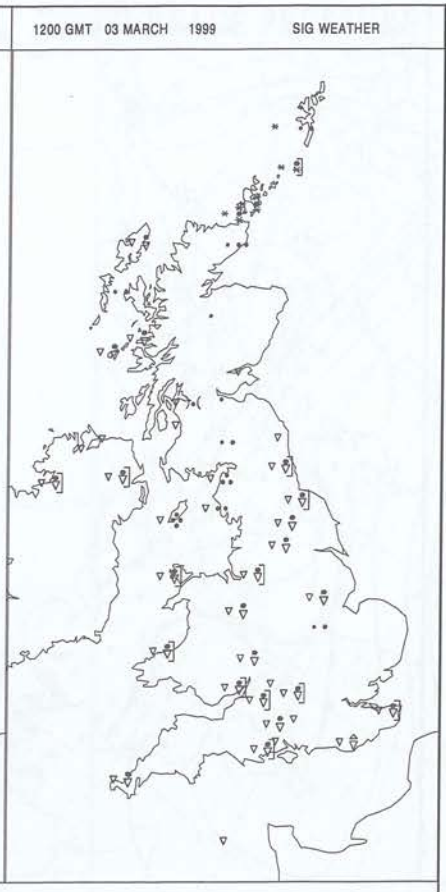
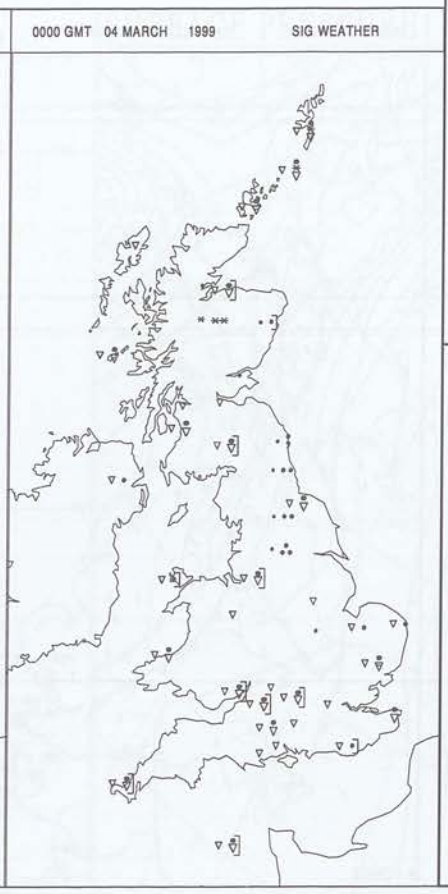
SIGNIFICANT WEATHER





Summary of UK weather for Wednesday 3 March 1999

Wednesday began with some persistent rain across the Northern Isles and some showers affecting Northern Ireland, and southern Scotland. Other places saw showers brought across from western and southern coasts on the strong southwesterly winds. This situation changed little until dawn although the rain turned to sleet at Fair Isle where the wind gusted to 75 knots between 0600 and 0700.

During the course of the morning there were sunny spells and relatively few showers in most eastern areas but otherwise showers continued to be blown from the west across central parts, with some of these heavy. At the same time the more general rain in the far north started to cascade into northwestern parts of mainland Scotland, with the rain turning to sleet across Orkney.

As the afternoon wore on the rain continued to sink south into northern Scotland with snow showers following in the far north, whilst elsewhere the showery regime continued to dominate. Indeed there were some heavy showers reaching eastern areas by mid afternoon on trough lines and this situation continued into the evening.

Temperatures were rather cold in the northern half of Scotland but elsewhere were normal or on the mild side of normal, although less mild than on previous days.

EXTREMES

Highest Maximum:
11.4 Heathrow, Greater London
Lowest Maximum:
2.4 Loch Glascarnoch, Ross & Cromarty
Lowest Minimum:
-3.0 Aboyne, Aberdeenshire
Lowest Grass Minimum:
-7.3 Aboyne, Aberdeenshire
Most Rain:
23.8 Keswick, Cumbria

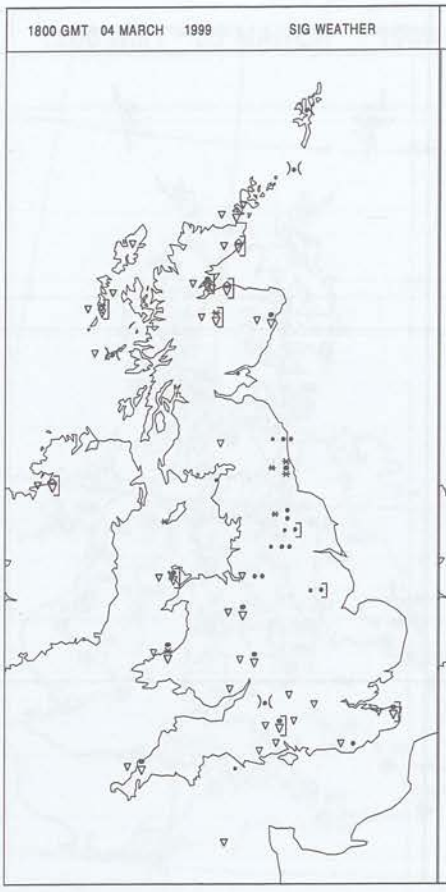
SIGNIFICANT WEATHER



Summary of UK weather for Thursday 4 March 1999

Showers affected many western parts through the early hours, while rain fell in Aberdeen, Yorkshire, Lincolnshire, East Anglia and the extreme southeast of England. Snow was reported in the Grampians.

The morning saw further rain or showers, of hail in places, in southwest and western England, Wales and western Scotland, while rain affected Norfolk and Kent. Sleet and snow fell in the Southern Uplands, and Isle of Man, while on lower ground of northern England and southern Scotland there was rain.

During the afternoon showers, some of hail or sleet, fell in many parts, with persistent rain or snow in the Borders and northeast England for a time. The east Midlands, East Anglia, Northern Ireland and southwest Scotland stayed mainly dry.

In the evening showers still peppered northern Scotland and Northern Ireland, where they were wintry, and southwest England, as persistent rain or sleet fell in an area from Northumberland down to Dorset.

Temperatures varied from rather cold in the Southern Uplands and parts of northeast England to normal in most other places.

EXTREMES

Highest Maximum:
8.8 Herstmonceux, East Sussex
Lowest Maximum:
2.8 Tulloch Bridge, Inverness-Shire

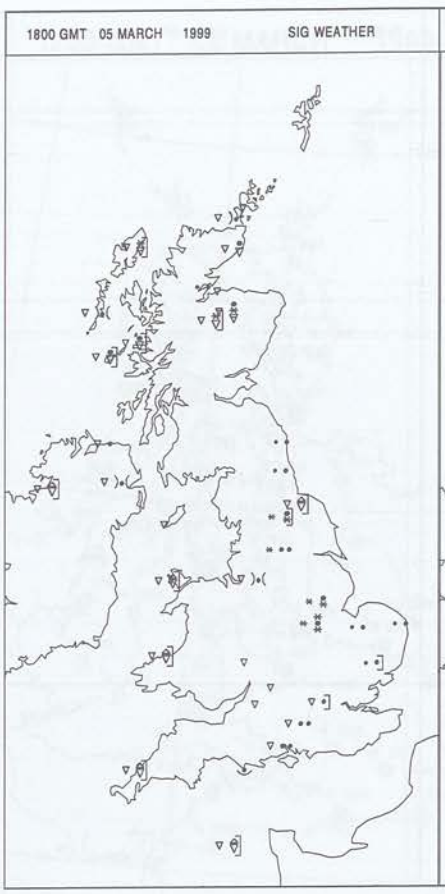
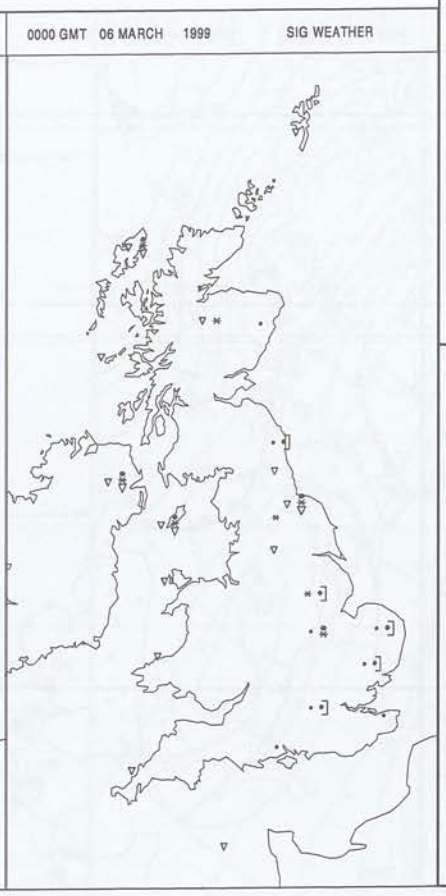
SIGNIFICANT WEATHER





Summary of UK weather for Friday 5 March 1999

Wintry showers peppered northwest Scotland, Northern Ireland, west Wales and southwest England in the early hours, meanwhile a band of rain or sleet affected central England in a swathe from Northumberland down to Hampshire, this edging east into East Anglia and London towards dawn.

During the morning the rain continued in northeast England, Lincolnshire and East Anglia, this turning to snow over the Pennines. The wintry showers continued in the west, falling as snow over high ground.

The afternoon saw the rain area hover over much of England east of a line from Berwick to Portland Bill, the extreme southeast though staying mostly dry. Sleet and snow still fell on the eastern slopes of the Pennines. Wintry showers continued in Northern Ireland, northwest Scotland, west Wales and southwest England.

In the evening the showers kept going, becoming persistent in northwest Scotland. The area of rain, with sleet in parts of the north, still affected places in wide strip from Newcastle to The Wash down to Hampshire and Sussex. Temperatures were generally between normal and rather cold.

EXTREMES

Highest Maximum:
7.8 Scilly, Isles Of Scilly
Lowest Maximum:
2.6 Loch Glascarnoch, Ross & Cromarty

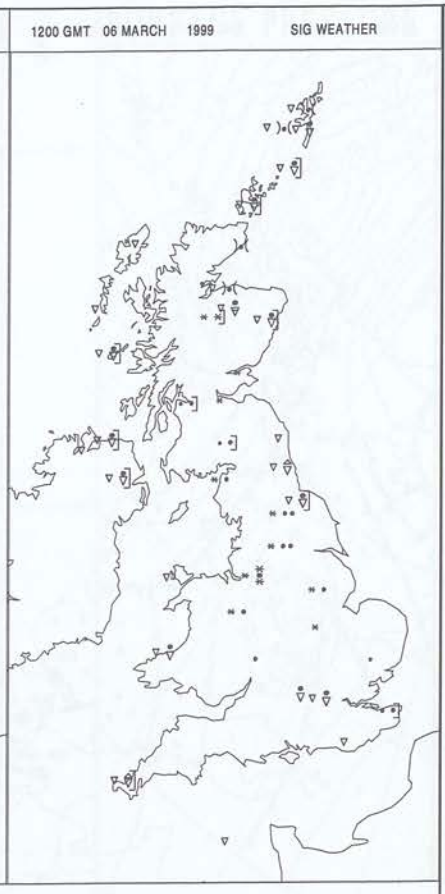
SIGNIFICANT WEATHER



Summary of UK weather for Saturday 6 March 1999

Overnight Northern Ireland, Wales and western parts of England and Scotland had clear intervals but also wintry showers, these mainly fell near the coast. Cloudy skies affected areas further east with rain, sleet and snow.

The morning continued along a similar theme with the best of the sunshine in the west, the extreme north and the south coast. Rain, sleet and snow fell over southeast Scotland and much of England, apart from the extreme south and southwest, and wintry showers persisted in the west and north.

There was little change during the afternoon, although the wet weather did sink southwards to remaining districts of southern England. The southwest remained bright with sunny intervals as did Northern Ireland and western parts of Wales and Scotland.

Through the evening, apart from a few showers, Scotland and Northern Ireland became mainly dry with clear spells in the north and west. Further outbreaks of rain, sleet and snow pushed south-westwards across England and Wales. Showers affected the southwest.

Temperatures were near normal across Scotland, Northern Ireland, west Wales and the extreme south of England, elsewhere it was cold or rather cold.

EXTREMES

Highest Maximum:
9.3 Southampton W C, Hampshire
Lowest Maximum:
3.2 Wattisham, Suffolk

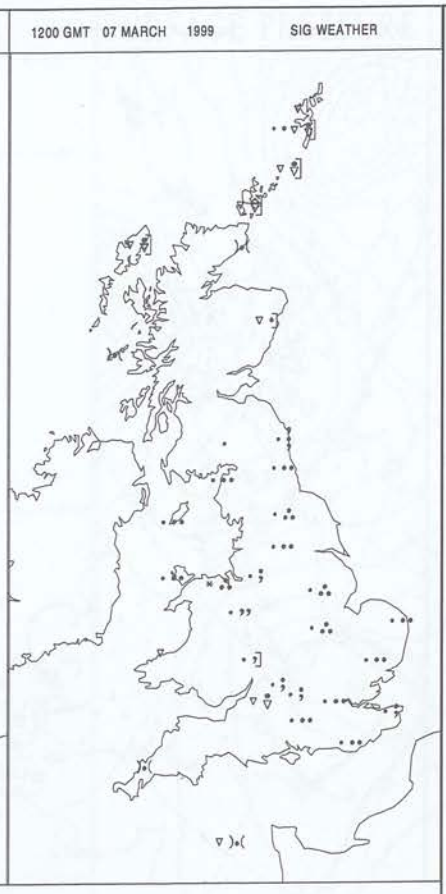
SIGNIFICANT WEATHER



Summary of UK weather for Sunday 7 March 1999

Northern Ireland and Scotland had a rather cloudy night with a few clear intervals in the west and coastal showers, some which were wintry. There were some clear spells across southwest England and west Wales as well as a few coastal showers. Elsewhere it was a cloudy with outbreaks of rain and drizzle with the heaviest bursts in the northeast of England.

Through the morning Northern Ireland and western Scotland were bright with a little sunshine, central and eastern Scotland remained mostly cloudy with a few showers in the northeast. Further showers affected coastal fringes during the afternoon.

The bulk of England and Wales had a cloudy day with outbreaks of rain. Apart from the odd shower, southwest England and southwest Wales was mainly dry with sunny spells.

There was little change during the evening, Scotland had broken cloud and most places were dry as was Northern Ireland. The band of rain over England and Wales slowly petered out from the southwest and clear intervals persisted across southwest England.

Temperatures were near normal in the southwest elsewhere it was rather cold.

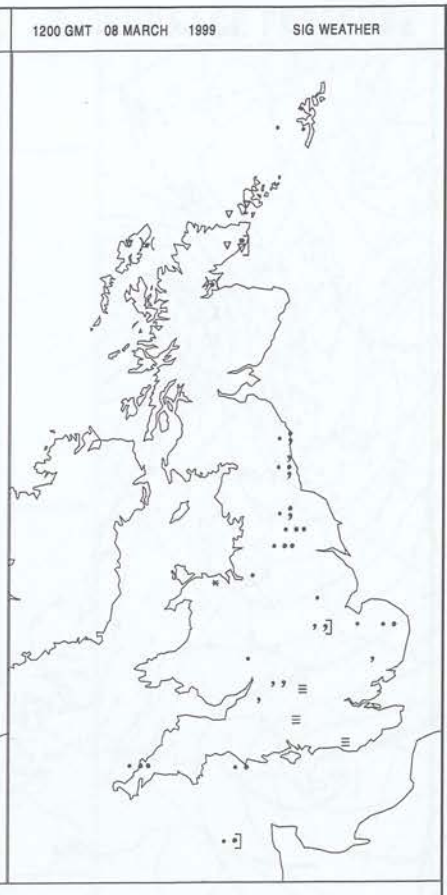
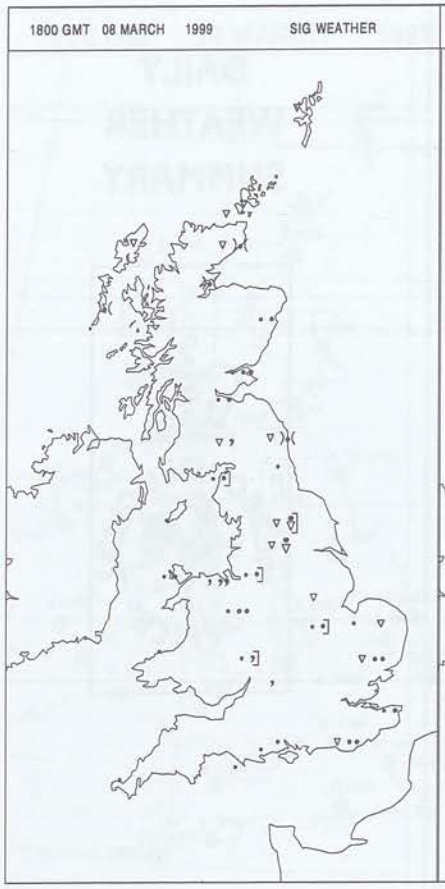
SIGNIFICANT WEATHER





Summary of UK weather for Monday 8 March 1999

Northern Ireland and much of Scotland had clear spells overnight but there were some showers across northern Scotland, wintry in places. Eastern counties of England and the Midlands had a cloudy night with some light rain and drizzle. Towards dawn rain spread into the Channel Islands. Elsewhere there were clear spells.

Northern Ireland and most of Scotland had a dry day with long sunny periods. There were a few showers across Scotland. In the evening there were some outbreaks of rain and sleet across southast Scotland and patchy rain in Northern Ireland.

England and Wales had a largely cloudy day. Across eastern counties of England, the Midlands and Wales there was some mainly light rain or drizzle, with snow over the tops of the Pennines and Snowdonia. Rain edged north from the Channel Islands into the far southwest and Sussex for a time in the late morning and afternoon, and into Kent in the evening.

Temperatures were mostly close to normal but it was rather cold over northern England, north Wales and southern Scotland.

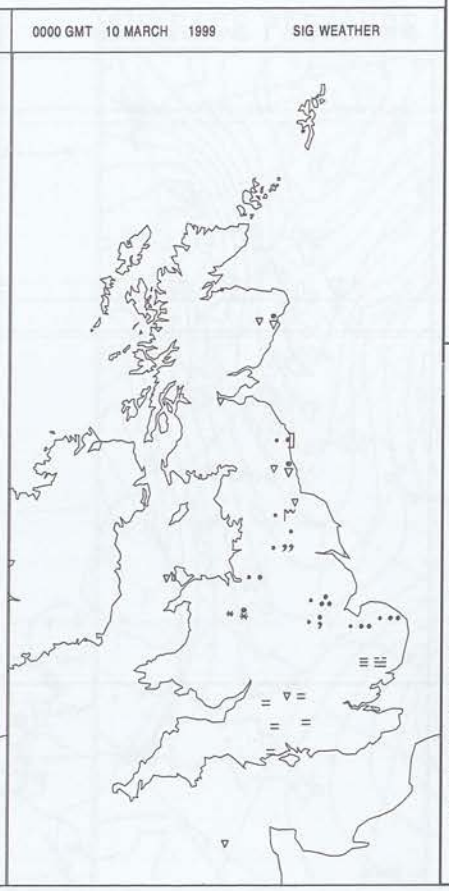
SIGNIFICANT WEATHER



Summary of UK weather for Tuesday 9 March 1999

Many areas had a dry night but there were a few showers in Northern Scotland and some outbreaks of rain in some southern and, more especially, eastern counties of England where there was even a little sleet in places.

East Anglia and eastern England had quite a wet day with some heavy bursts of rain at times and some sleet. There was some snow over the Pennines. The rain extended across into the Midlands and, at times into parts of northwest England. There were a few showers in eastern Scotland and in some southern counties of England but many areas had a dry day. The best of the sunshine was in northwest Scotland and in some southern counties of England.

Through the evening the rain, with some sleet, continued in eastern England, east Anglia and the Midlands. Elsewhere it was dry. There were good clear spells in Scotland, Northern Ireland and southern England. In the south it became misty in places.

Temperatures were mostly near normal but it was rather cold in the wetter areas of eastern and central England.

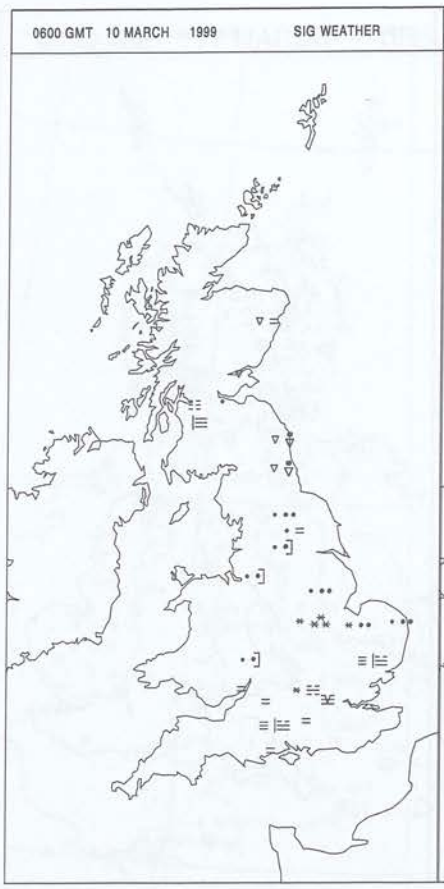
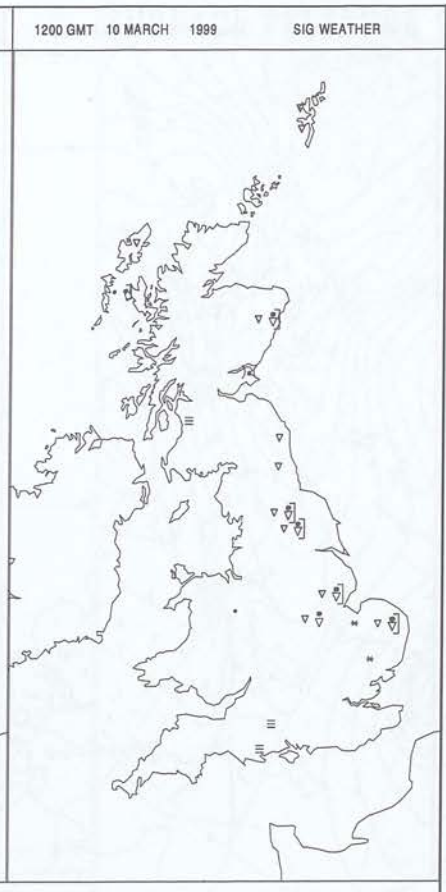
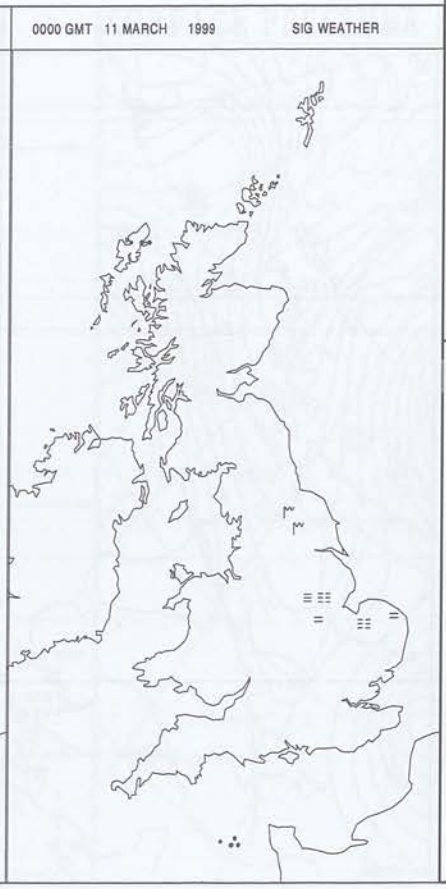
SIGNIFICANT WEATHER







Summary of UK weather for Wednesday 10 March 1999

A band of rain, sleet and snow affected much of East Anglia, the Midlands and the Peak District through the night. Elsewhere, apart from a scattering of showers in northeast England and eastern Scotland, it was a dry night. There were good clear spells in the south which allowed a frost and some mist and fog patches to form by the end of the night.

During the day, the rain, sleet and snow gradually died out from the west, as did the showers in eastern areas of Scotland and northeast England. By afternoon it was a fine day in many parts of the country with just the odd light shower in northern England and the far northwest of Scotland. The best of the sunshine was in the south.

The evening was largely dry with clear spells in many areas. It was rather more cloudy in the northwest though and some outbreaks of rain edged into the Western Isles.

After a frosty start away from Midland areas, temperatures were generally near or a little below normal.

EXTREMES

SIGNIFICANT WEATHER

Summary of UK weather for Thursday 11 March 1999

Much of England and Wales had clear periods overnight, allowing fog, with some freezing patches, to form, mainly in eastern England. Scotland and Northern Ireland were more generally cloudy, with the thickest cloud and strong winds in the northwest giving some outbreaks of rain. As the night progressed, medium level cloud increased over southwest England as well, with a few showery bursts of rain by morning.

During the morning the fog slowly cleared from eastern England. Meanwhile, the cloud tended to increase over the country from the northwest and the southwest, although there were still some bright spells in the east. Showery rain pushed up from the southwest during the afternoon, mainly across Wales and western England. Rain and sleet continued in northwest Scotland.

The rain spreading up from the southwest extended to many northern and central parts of England during the evening, with a few outbreaks in the southeast as well. The rain in northwest Scotland tended to become more showery through the evening.

Temperatures ranged from a little below normal in the northwest to mild in parts of southern and southwestern England.

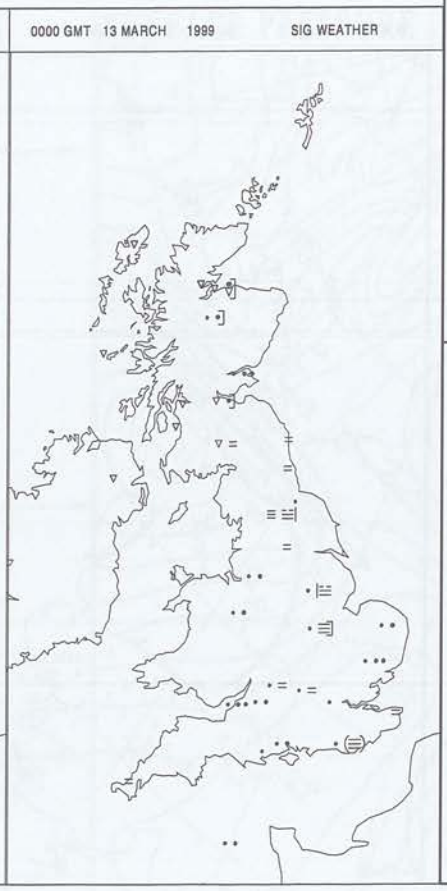
SIGNIFICANT WEATHER



Summary of UK weather for Friday 12 March 1999

Overnight there were a few showers across north and west Scotland with rain over southwest Scotland, northern England, Lincolnshire and Norfolk. There was some drizzle across west Wales and southwest England, with a few fog patches across southern England.

Northern Ireland had a bright day with showers, especially in the afternoon and evening. Western Scotland had a scattering of showers. The rain and showers across the Northern Isles soon cleared, as did the rain further south. Most of Scotland had a dry afternoon and evening.

Much of England and Wales had a rather cloudy day. A few spots were sunny, notably north Wales. Rain soon reached the Channel Islands and showery rain spread across central southern England by midday, with further pulses of rain through the afternoon. In the evening some heavier rain developed over the West Country. The showery band over central southern counties intensified for a time, then edged across southeast England and East Anglia. Thunder was reported off the Sussex coast in the early evening.

It was mild generally and over parts of southeast England exceptionally mild.

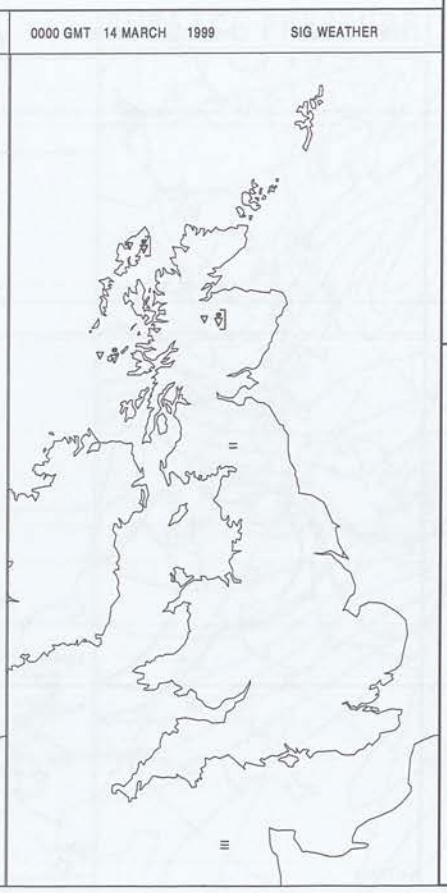
SIGNIFICANT WEATHER



Summary of UK weather for Saturday 13 March 1999

Overnight there was some rain over southern Scotland and in the Northern Isles, with broken cloud elsewhere in Scotland and across Northern Ireland. Rain over the West Country, Central Southern England, the Midlands and East Anglia edged slowly north and east overnight becoming mainly light and patchy. There was some fog over northern England.

Northern Ireland had a few showers during the day and long sunny periods. The Northern Isles had rain in the morning, but many other parts of Scotland were largely dry with sunny periods. There were some showers, mainly in the west, with hail in places.

Most of England and Wales had a dry day with some sunshine, after early drizzle had cleared the southeast and East Anglia. The fog in the north soon cleared. There were a few showers in the west during the morning.

Temperatures were close to average over most of Scotland. Elsewhere it was generally mild or very mild and locally exceptionally mild in parts of southeast England.

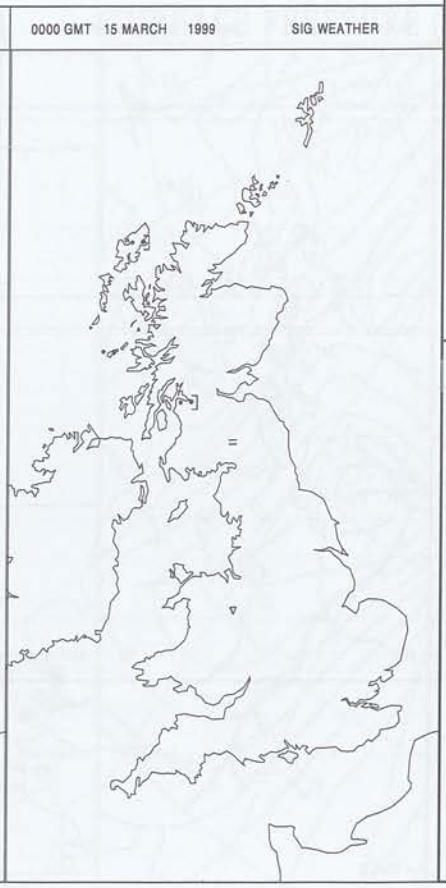
SIGNIFICANT WEATHER



Summary of UK weather for Sunday 14 March 1999

Showers affected Scotland during the early hours, these were most frequent in the northwest, but many parts saw at least one, the exception being northeast Grampian. The odd fog patch affected parts of southern England.

During the morning the fog soon melted away, while showers still peppered Scotland, some also turning up in Northern Ireland, northern England, and through the Cheshire Gap. Northwest Scotland, particularly the Outer Hebrides, saw the most.

In the afternoon showers tended to die away, a few still affecting the east of Scotland, The Northern Isles, Cheshire and Shropshire. Most other parts were dry with a fair amount of sunshine.

The evening saw a shower near Shrewsbury, while the rest of Britain stayed dry until patchy rain gradually spread into western Scotland from the Atlantic. This reached Glasgow before midnight.

Temperatures varied from very mild across much of England and eastern Scotland to mild almost everywhere else.

SIGNIFICANT WEATHER

Summary of UK weather for Monday 15 March 1999

Rain affected western Scotland and Northern Ireland at first, this stretched east across much of Scotland by dawn, however, in most places it was light and patchy. The odd mist or fog patch turned up in southern England.

During the early morning there were further outbreaks of rain in Scotland, these mainly in the west, however, by midday an area of heavier and more persistent rain had spread into Northern Ireland and western Scotland, it's leading edge lying from Thurso to Belfast.

After midday this area of rain stretched east across Scotland and affected most parts by mid-afternoon, while drier conditions soon followed into Northern Ireland. By dusk the rain was mainly confined to places from the central Lowlands north, although some parts were dry. Northeast England also had some light rain late on.

The evening saw the main area of rain leave Grampian to the east, but further rain had arrived into northwest Scotland well before midnight. Northern Ireland, the Isle of Man and Anglesey also turned wet, as did the Borders for a time.

Temperatures varied from very mild across much of England and Wales, to mild in most other parts.

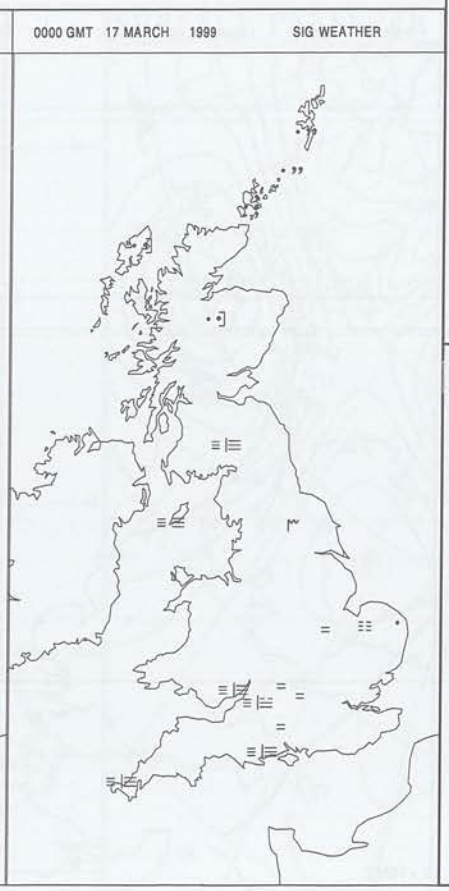
SIGNIFICANT WEATHER



Summary of UK weather for Tuesday 16 March 1999

Overnight, there were outbreaks of rain across Northern Ireland, Scotland, west Wales and northern England. Most of the rain was light, but moderate bursts were reported in the northern and western isles and in northeast England. Elsewhere, it was dry with variable cloud and some mist and fog patches. By dawn, the rain had died out in Northern Ireland and across much of west Wales.

During the morning, the mist and fog in the south cleared leaving sunny spells, but elsewhere the cloud persisted and there were further outbreaks of rain across Scotland and northern England and, for a time, north Wales. Patchy fog was reported along coasts of northwest England and west Wales. In the afternoon, much of the rain in northern England and north Wales petered out, but a few spots were recorded in Norfolk. By dusk, virtually the whole of the UK was dry with the exception of northwest Scotland and the northern isles. During the evening, sea fog was reported along the coast of south Wales, and mist/fog developed inland in southern England.

Temperatures were above the seasonal average, and away from coasts it was often either warm or very warm, even in the cloudier north.

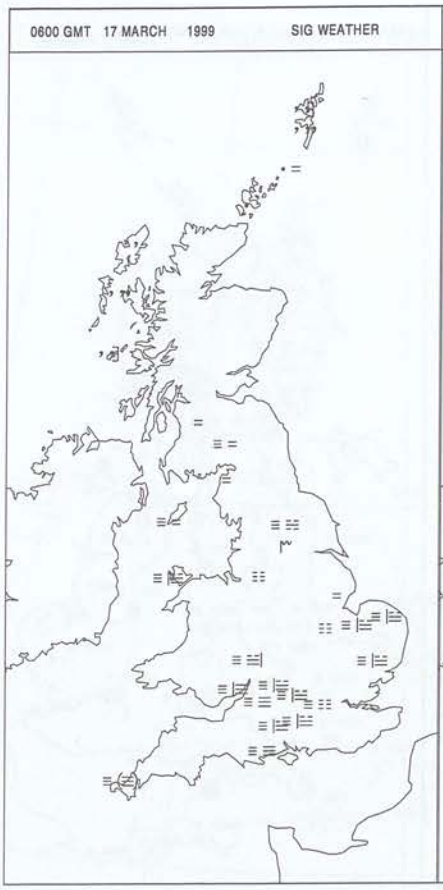
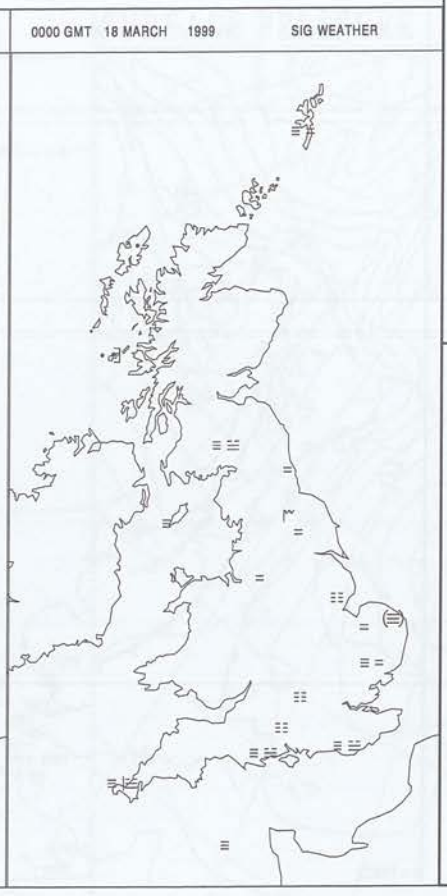
SIGNIFICANT WEATHER





Summary of UK weather for Wednesday 17 March 1999

Most places had a dry night with varying amounts of cloud. Fog or low cloud affected some districts, with drizzle over the western and northern isles of Scotland.

It soon became sunny over most of the British Isles, with rapidly rising temperatures. There was, though, a fair amount of cloud over Scotland, especially in the west; many of the islands were windy with some drizzle, and heavier rain arrived in the late evening. Further south, low cloud and sea fog plagued some coastal areas; the biggest patch covered a large part of the Irish Sea and spilled into Cumbria, Lancashire and Greater Manchester, occasionally affecting the north coast of Wales and Merseyside. Much of the Isle of Man was affected, but it was sunny north of Snaefell. Fog also drifted close to Bristol Channel and southwest Wales coasts, the Channel Islands and Kent and Essex coasts but, for most of the time, stayed just offshore.

Much of the country had an exceptionally warm day for mid-March, although no significant temperature records were broken. Temperatures were nearer normal in the cloudier/foggy areas.

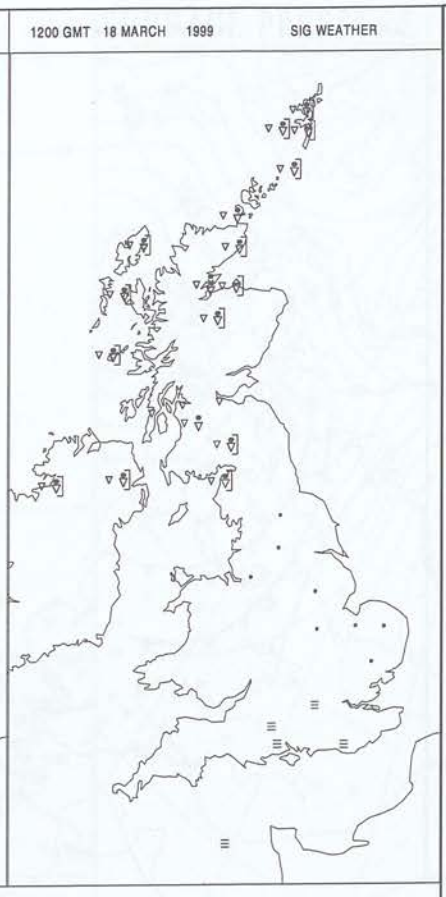
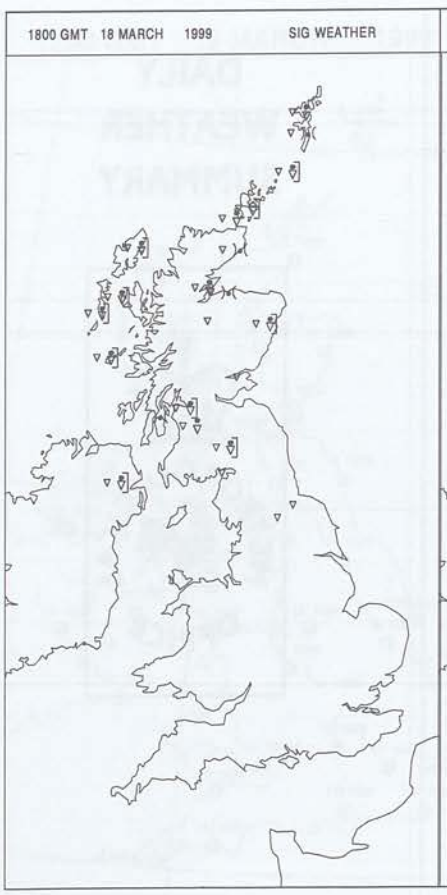
SIGNIFICANT WEATHER





Summary of UK weather for Thursday 18
March 1999

There was only patchy cloud across England and Wales at first with mist and fog patches across East Anglia and southern England.

Scotland and Northern Ireland was rather more cloudy with sporadic outbreaks of rain.

During the night the cloud spread southwards across the UK, producing further outbreaks of fairly light rain, although most parts stayed dry. Clearer weather with a scattering of showers followed across Scotland, Northern Ireland and much of northern England before dawn. During the morning the cloud was still thick enough across East Anglia for a time to give the odd spot of rain, but the cloud continued to slip south and fragment. That left England

and Wales with a dry, bright day and long sunny periods. Northern Ireland and Scotland had sunny periods, but also a scattering of showers to. The showers were mainly across northern Scotland and around the coastal fringes, and they were wintry at times in the north.

Temperatures were close to normal across northern Scotland, but for much of the country it was rather warm, and locally warm along the south coast of England.

EXTREMES

Highest Maximum:

SIGNIFICANT WEATHER

Summary of UK weather for Friday 19 March 1999

Showers affected parts of Scotland overnight, mainly northern Scotland and the Northern Isles, with some wintry showers in places. A few showers also affected Northern Ireland but the rest of the country had a largely dry night. There were some clear spells giving a ground frost in places, but generally there was a good deal of cloud across the country.

There were further showers across northern parts during the day, again mainly across the Northern Isles, with only fairly isolated showers elsewhere. However, rain reach northern Scotland late in the afternoon. This rain, spread south-eastwards across Scotland during the evening, and into the border counties of northeast England, fragmenting as it did so.

The rest of the country had a largely dry day with variable, often large amounts of cloud. The best of the sunshine was reserved for northeast England and the West Country.

Temperatures were close to normal or on the cool side across the Northern Isles and northern Scotland. Across the rest of the UK temperatures were generally rather warm for the time of year, and locally warm across the Welsh marches.

SIGNIFICANT WEATHER

Summary of UK weather for Saturday 20 March 1999

Rain affected eastern Scotland, Northern Ireland and Northeast England at first, with snow reported from Shetland, but this petered out during the night. Elsewhere it remain fairly cloudy, but clear spells developed over the West Midlands and central Southern England giving fog patches in places as well as a localised frost.

Western Scotland and the Northern Isles had a fairly wet day, and the rain spread to eastern area by midday. A few showers or outbreaks of light rain occurred over Northeast England and Northern Ireland from mid afternoon onwards. Most of England and Wales had a dry if rather cloudy day, although along the English Channel coastline it was a sunny morning.

The evening was rather cloudy with rain continuing over Scotland and Northern Ireland, and outbreaks of rain reaching Northwest England and North Wales. A few spots of rain also fell over eastern parts of Kent.

Temperatures in central and western area were around normal, but southern and eastern coastal areas were rather warm.

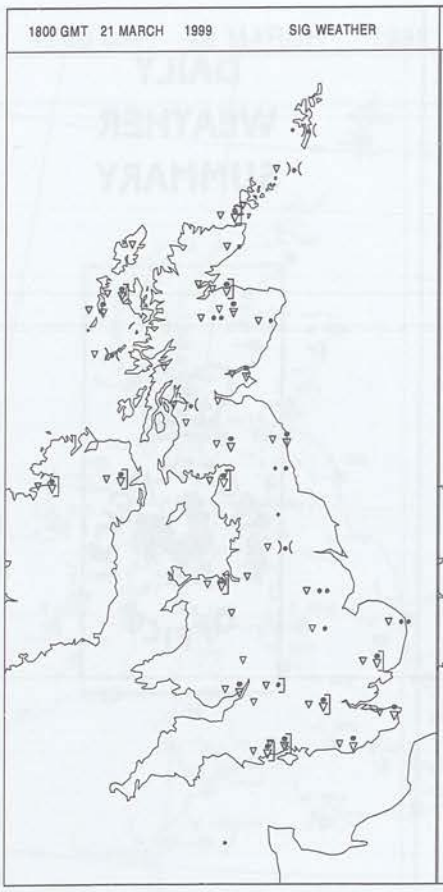
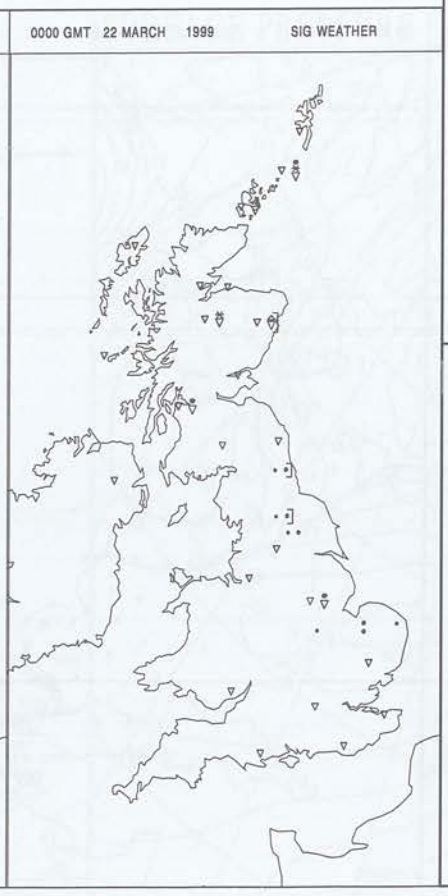
SIGNIFICANT WEATHER





Summary of UK weather for Sunday 21 March 1999

It was a wet night over much of Scotland with the rain heavy in places. Rain also affected Northern Ireland, but this turned more showery towards dawn. The rain spread into Wales and western parts of England during the night and had reached all bar the extreme southeast by dawn.

Much of the country had outbreaks of rain or showers during the morning, with southern and central England seeing the more persistent rain. By midday the rain turned more showery everywhere and through the afternoon Wales, Northern Ireland and western parts of England and Scotland found the showers dying out. On the eastern side of the country the showers were heavy at times with hail reported over East Anglia and southeast England. Thunder was also reported over Folkestone and the Thames estuary.

During the evening showers or longer spells of rain continued to affect eastern parts of England and Scotland, with wintry showers reported from the Northern Isles.

Temperatures generally were around normal, but some areas sheltered from the wind became rather warm.

SIGNIFICANT WEATHER

Summary of UK weather for Monday 22 March 1999

Much of the country had a dry night with varying amounts of cloud, but there was some rain or drizzle over the east and southeast of England, and a few showers towards north-facing coasts elsewhere. By morning, more general cloud and outbreaks of rain had reached northwest Scotland. It was a windy night near the east coast of England.

Thick cloud moved steadily southeast during the day, but it was bright or sunny for a few hours in the more southerly counties - though with isolated showers. Most of Scotland and Northern Ireland became wet during the morning, with snow in the mountains and over the northern isles (especially Shetland). By the evening, virtually the whole of the British Isles was under a thick cloud cover and many areas had rain or drizzle from time to time. However, in most places, rainfall totals were small.

Temperatures varied around the normal, but northeasternmost Scotland was rather cold.

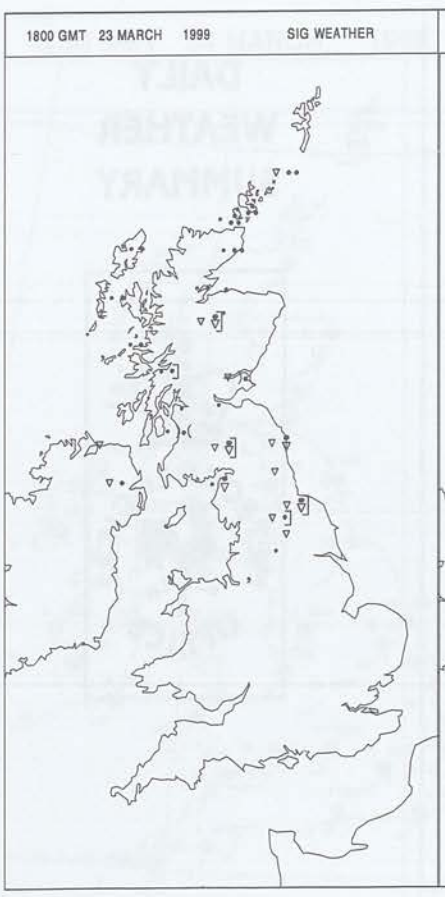
SIGNIFICANT WEATHER



Summary of UK weather for Tuesday 23 March 1999

Most of the country had a cloudy night, but the cloud broke up towards morning in the south. There were outbreaks of rain or drizzle in the north and east.

Shetland had a bright day, before it clouded over with rain in the evening. Most other parts of Scotland, Northern Ireland and northern England were cloudy with some further rain or drizzle at times, although there were a few brighter intervals. Over Wales, central and southern England it was dry, and many places were bright or sunny; the best of the sunshine was near the south coast from East Sussex to Dorset, whilst Cornwall, the Channel Islands and parts of Wales stayed cloudy. In the evening, cloud returned to many areas from the southwest.

It was rather cold on Shetland, and temperatures were near normal over northeast Scotland. Otherwise, it was mostly a warm day, although temperatures were nearer normal near some windward coasts. It was breezy in Pennine regions.

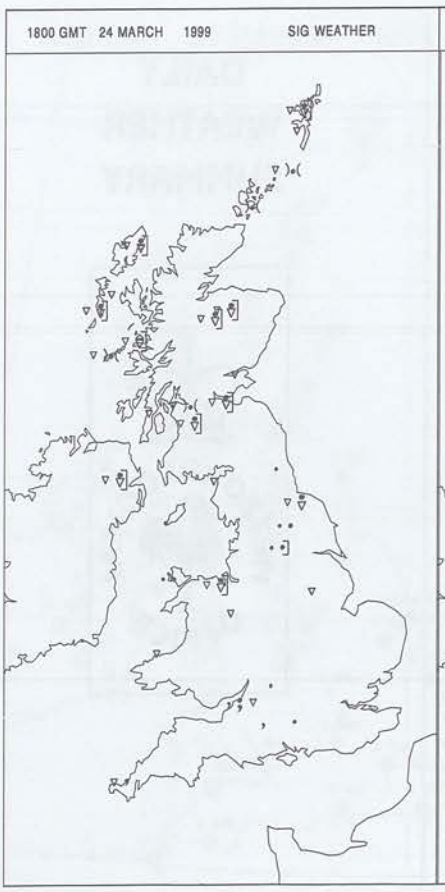
SIGNIFICANT WEATHER



Summary of UK weather for Wednesday 24 March 1999

Wednesday started mostly cloudy with a few scattered outbreaks of patchy rain or drizzle in England but with more general rain across the Northern Isles and northern Scotland.

By dawn the rain had extended into central parts of Scotland and Northern Ireland with showers following into the Northern Isles. There was little change across England and Wales with just a few scattered outbreaks of light rain or drizzle.

During the morning the showers became more extensive in northern and western Scotland with a few showers of hail in the Northern and Western Isles. By the afternoon the rain had crossed northern Scotland but was lingering across central and southern parts of Scotland and some patchy rain was affecting northwest England. The remainder of England and Wales was still mainly dry but cloudy.

In the evening the cloud started to thin and break from the southeast across England, whilst it persisted in northern and western areas with some light rain or drizzle in the southwest and northwest of England and parts of Wales.

Temperatures were mostly average in the north but were above normal and locally rather warm.

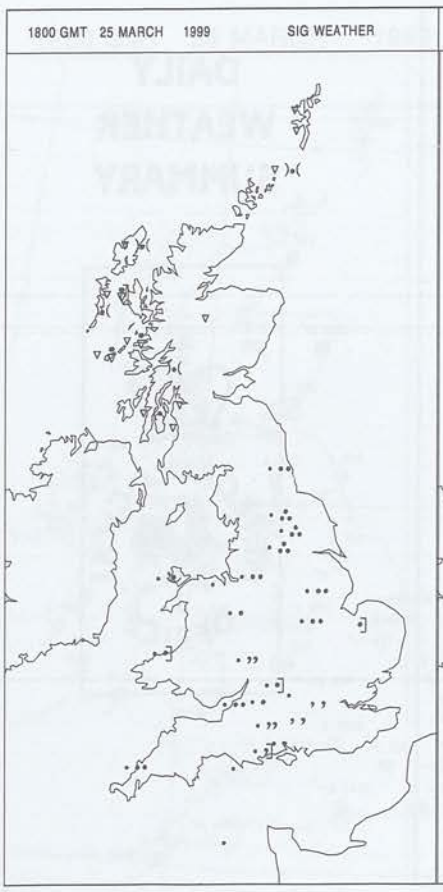
SIGNIFICANT WEATHER



Summary of UK weather for Thursday 25 March 1999

The night was dry over most of Northern Ireland with clear periods and quite a widespread slight frost. Scotland had clear spells, especially in the east, but scattered showers affected western and northern parts. Wales and southwest England were mostly cloudy, and although generally dry at first, outbreaks of rain became more extensive towards morning. The remainder of England had variable amounts of cloud and clear intervals. Over central southern England there were patches of mist and fog.

During the day, Scotland and Northern Ireland had sunny periods, with the best of the sunshine occurring to the east of high ground. There were a few sharp showers, particularly in the west. England and Wales were mostly cloudy, and outbreaks of rain occurred. However, much of northwest England stayed dry and fairly bright; and East Anglia, along with southeast England, remained mostly dry until evening after some hazy sunshine during the morning.

Temperatures were generally near, or rather above, normal, but East Anglia and southeast England were rather warm, and much of Wales and central and northern England were rather cold.

SIGNIFICANT WEATHER

Summary of UK weather for Friday 26 March 1999

Scotland had a night of clear spells and scattered showers. The showers mainly occurred in the west and north, with lengthy clear periods elsewhere allowing a frost to occur. Northern Ireland had clear periods and a ground frost, although showers, heavy in places developed towards morning. Wales had a touch of frost after cloud generally cleared in the early hours. England remained rather cloudy, and in central and eastern counties there were outbreaks of rain and drizzle. Western and northern parts became clearer , but towards morning, some heavier bursts of rain spread northeastwards into central southern England.

During the day, nearly the whole of the UK had a mixture of sunshine and showers , some of the showers were heavy, and wintry over high ground in the north. The best of the sunshine generally occurred in coastal parts of southwest and northeast England. Over southeast England and southern parts of East Anglia there was some more persistent rain during the morning, this not clearing away from the extreme east until late afternoon.

Temperatures were generally near normal.

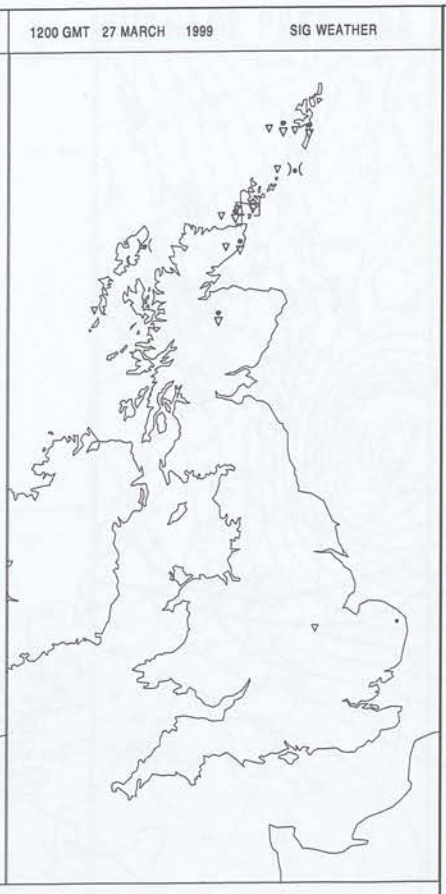
SIGNIFICANT WEATHER



Summary of UK weather for Saturday 27 March 1999

An area of cloud straddled the country during the night, roughly from the Wash to southwest Wales. This cloud produce some showers and patchy rain across the Midlands, with the odd shower across Wales and north Norfolk. There were a few showers across the Northern Isles and around the coastal fringes of Northern Ireland, but the rest of the country had a largely dry night. A widespread ground frost developed, with an air frost across Scotland and parts of southern England. Some mist and shallow fog also formed across East Anglia and Southern England.

During the day, showers affected the Northern Isles and occasionally the far north of Scotland, with the odd wintry or hail shower at times. Across the rest of the country, apart from the odd isolated shower most parts had a dry, bright day with plenty of sunshine. Temperatures were close to normal across the Northern Isles, Northern Ireland, much of Scotland, and the far north or England. Across the rest of England and Wales it was generally rather warm, and locally warm across parts of southern England.

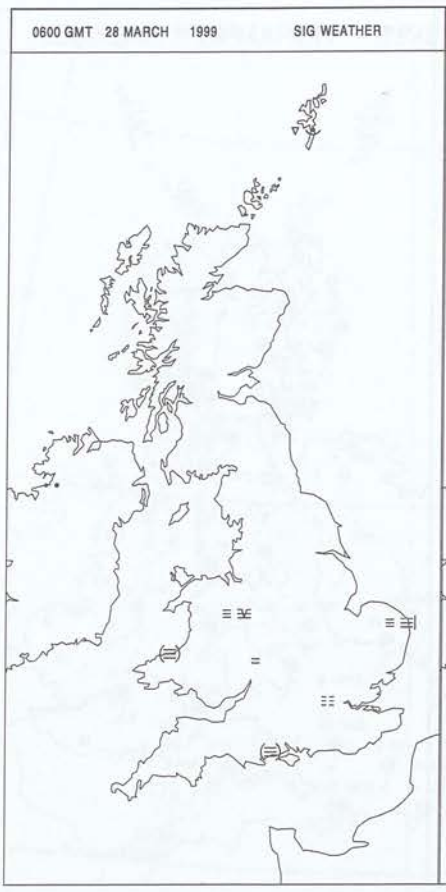
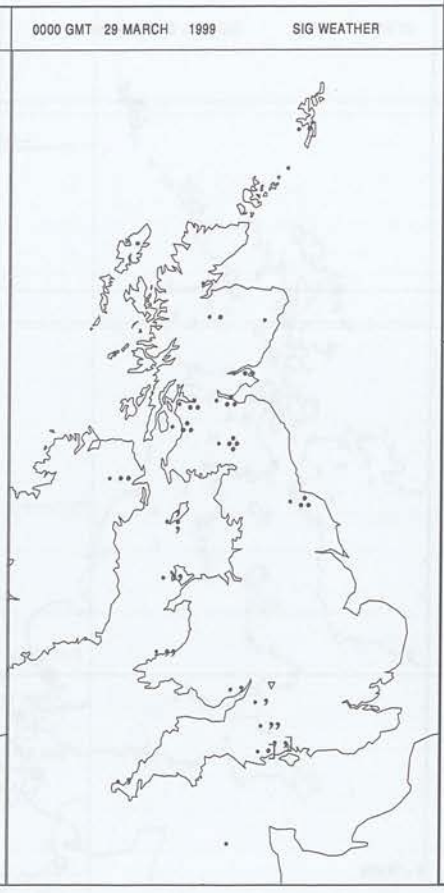
SIGNIFICANT WEATHER





Summary of UK weather for Sunday 28 March 1999

Skies were largely clear at first, allowing some mist and shallow fog patches to form across parts of England. Through the night though, cloud increased across north-western parts, bringing rain to western parts of Northern Ireland later in the night. Apart from an odd shower across Shetland, the rest of the country had a dry night. Through the morning the rain spread across the rest of Northern Ireland, and into western Scotland, and northwest Wales, accompanied by strong to gale force winds. The rain continued across the rest of Scotland, and into northwest England, west Wales and the far southwest of England during the afternoon. The heavier rain was confined to Scotland, and only fairly light and patchy further south. The cloud spread further south through the afternoon and evening but the rest of England and Wales had a dry and bright day, with good sunny periods, particularly across East Anglia and southeast England.

Across Scotland,Northern Ireland, northwest England and the western fringes of Wales, temperatures were close to normal. Elsewhere it was generally rather warm, and locally warm across parts of East Anglia and southeast England.

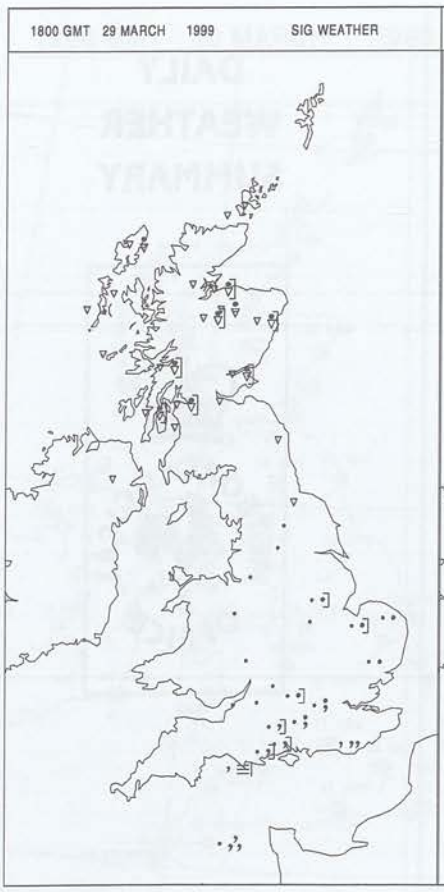
SIGNIFICANT WEATHER



Summary of UK weather for Monday 29 March 1999

Northern Ireland and the southern half of Scotland had a wet night with heavy rain at times. The rain edged southeastwards to affect northwest England and western parts of Wales later in the night. Other western and central parts of England had outbreaks of drizzle. Eastern counties of England, together with much of northern Scotland had a dry night.

The rain across Northern Ireland and southern Scotland cleared away southeastwards during the morning, and was replaced by brighter, showery conditions already over northern Scotland. Wales, together with northern and western counties of England had a wet morning with outbreaks or rain. These parts became largely dry through the afternoon with sunny spells developing in the west. The rest of England had a mostly dry morning, but rain affected many places for a time in the afternoon before clearing away southeastwards during the evening.

Most parts had a windy day.

It was generally rather warm or warm.

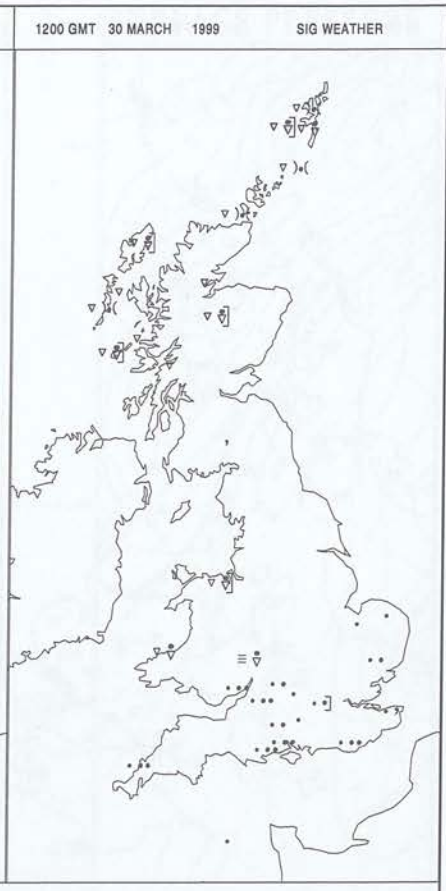
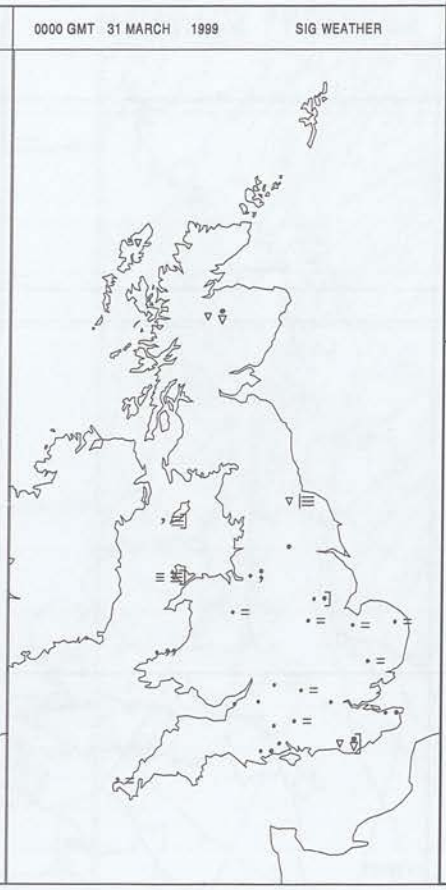
SIGNIFICANT WEATHER





Summary of UK weather for Tuesday 30 March 1999

The bulk of the country started the night off quite cloudy with some patchy rain over the southeast of England and East Anglia. There were clear skies across Northern Ireland and western Scotland but also a few showers, particularly near the coast and over the Highlands. During the night the cloud broke up over Scotland and also northwest England and Wales, elsewhere it remained cloudy with rain across most of southern England by morning.

Rain and drizzle affected southern England and East Anglia through the morning. Eastern England stayed rather cloudy, further west and north it was brighter with the best of the sunny skies across Scotland and Northern Ireland.

The rain remained in the south during the afternoon and spread into southeast Wales. The extreme southeast of England turn foggy. It was mostly dry and bright elsewhere although a few showers continued to clip the northwest and the Highlands of Scotland. Northwest Wales turned misty with fog patches.

There was little change across the country during the evening however the rain slowly died away in the south. Temperatures were generally in the warm or rather warm category.

SIGNIFICANT WEATHER

Summary of UK weather for Wednesday 31 March 1999

The night started with clear intervals across Scotland, Northern Ireland and northern England. Further south it was cloudy with some patchy rain and drizzle. Fog patches affected west Wales and also eastern areas of Northern Ireland.

By morning cloud had increased across northern England and southern Scotland with some rain and drizzle. The drizzle died away in the south and sunny intervals developed across southeastern and eastern England. There was also some sunshine in northern Scotland before the cloud moved in.

Sunnier skies spread across much of England and Wales during the afternoon. Thickening cloud brought rain to Northern Ireland and the wet conditions slowly progressed northwards into western Scotland. The rest of Scotland remained cloudy with some fog patches near the east coast.

During the evening the rain died out over Northern Ireland but continued to fall in north and northwestern Scotland. Central and eastern Scotland stayed mostly dry but rather cloudy. England and Wales were also dry with a veil of high cloud over most parts.

It was a warm or very warm day, but cooler along some coasts.
